ENGINEERING BULLETIN

Subject :	Oil cooler for Brine chillers				
Released By:	SSN	Bulletin No.:	EB/15-16/11	Date:	8 th March, 16

We are releasing herewith revised Rating Charts for KWS R407C – Brine (with & without Economizer). These charts are for target brine temperature below -10 deg. C. Selection software provides selection up to -10 deg. C

The reason for this revision is:

“Effective from April-16, 407C brine chillers below -10 deg. C will compulsorily have oil cooler.”

So, price of oil cooler to be considered for such chillers.

In earlier version, oil cooler was provided only for lift conditions marked by grey cells, but in process of standardization and with certain site feedbacks we have made it standard below -10 deg. C.
