ENGINEERING BULLETIN

Subject :	Discontinuation of Economizer option				
Released By:	SSN	Bulletin No.:	EB/17-18/03	Date:	23 rd June, 17

From 23rd June 2017, all chiller models with Economizer option will be discontinued from KCPL offerings.

Reason for discontinuation:

1. Introduction of new higher capacity compressors
2. Negligible improvement in efficiency. Anyways cases where Economizer is used are mostly low capacity and/or brine chillers below -10 deg. C, where efficiency requirements are not that stringent.
3. The copper piping becomes very congested and time consuming demanding more man power. This balances any cost benefit and next higher model becomes the logical option
4. There are certain site issues associated with Economizer, like oil trapping, TXV settings etc.

Notes:

1. For orders already received or in advanced stages of negotiations contact engineering, we will try to give selection without Economizer with same performance or else can give economizer for these orders only.
2. New selection software will be released early next week, which will not have models with economizer instead new models.
3. Rating charts released via ESP-14-15-04 for Brine series with economizer will not be valid here onwards.
