

ENGINEERING BULLETIN

Feature Release

This Bulletin is to inform that release of refrigerant cooled oil cooler feature for centrifugal and screw chillers.

No: EB/17-18/010,
19th December 2017

Dear Colleague,

We hereby wish to inform you that the official release of refrigerant cooled oil cooler for all centrifugal as well as screw chillers.

This has following advantages:

➤ Eliminates extra water side piping

It eliminates extra water side piping at customer end thus by reducing issues of water side flow.

➤ Avoid chocking and leakage problems of PHE

By using refrigerant cooled oil cooler, we ensure no any entry of debris and foreign particles. This eliminates chocking and blocking of oil cooler PHE due to entry of foreign particles from water side piping. This improves the lifecycle of PHE oil coolers.

➤ Oil cooler load included in chiller total capacity

Chiller selection software shows capacity after deduction of Oil cooler load.

E.g. If software is showing chiller capacity of 500 TR and oil cooler capacity 4 TR, that means chiller giving actual capacity of 504 TR for same power consumption.

Note: Existing approved orders shall be implemented as per old design. Selective orders shall be replaced by new design which will be communicated on case to case basis.
