Bulletin No: EB/25-26/002 Date: 29th March 2025

Introduction of Acoustic Insulation for Screw Chillers

➤ Introduction

KCPL is pleased to introduce a new value-added product, **Acoustic Insulation**, now available as an optional feature for customers to buy. This product is specifically designed to address noise concerns in screw chiller installations where sound levels exceed 82 dBA at a 1-meter distance.

➤ Product Description

The **Acoustic Insulation** is composed of specialized noise-absorbing materials integrated within thermal insulation. It is wrapped around the compressor using a special adhesive to completely cover the compressor as shown in adjacent photo. To ensure proper application, the installation will be performed **exclusively by KCPL authorized personnel** as per standard approved procedure.

➤ Ordering Information

Acoustic Insulation can be ordered per compressor using the top code **12.225.24.301.SP**.

➤ Expected Noise Reduction

Utilization of the Acoustic Insulation is expected to achieve the following noise reductions at 1 m distance:

- Water-Cooled Screw Chillers: Approximately **2 dBA**
- Air-Cooled Screw Chillers: Approximately **3 dBA**

It is important to note that noise reduction is a complex subject influenced by various conditions at installation site.

➤ Customer Feedback & Communication

All customer requirements and feedback related to **Acoustic Insulation** should be communicated to the engineering team to facilitate continuous improvement and support. For further information, please contact the engineering department.
